**CHARGE FASTER, DRIVE FURTHER**

## Features

Smart Portable Type 2 EV Charging Station with Australian Plug allows you to charge your electric vehicle via a standard Australian wall socket.

Bluetooth compatible (one connection at a time only)

Light Weight: 2.1kg

5.5 metre length

RCD Type A for maximum electrical safety. This is a requirement for EV charging not present in many generic portables.

LED display temperature control to prevent overheating

IP66 Waterproof with ABS materials for strength

LED screen indicating charging speed, time and energy transferred

Meets international & Australian standards

Auto charge recovery

Overcurrent protection

Warranty: 2 Years

Operating Temperature: -25°C to +55°C

## How to operate

### How to connect to charger

This charger is a Bluetooth based smart charger. Please download the free EVSEMaster app from either the Apple or Google App store. Ensure you have your devices Bluetooth enabled, then connect to the charger.

\*Please note that for each individual charger, they have their own unique number to identify which charger is yours. When connecting to your charger, please match up the name that is shown on the app to the unique number at the bottom of the LCD screen when the charger is powered on.

The unique number will look something like: EVSE1234 (numbers will be unique)

### App overview:

### How to start charge

Once you have downloaded the app, you can start the charging session on the app. You can also start the charging session via the button on the front of the charger.

\*Please note that starting the charging session via the button will give you the last set current level on the app. To utilise the smart functions, please use the EVSEMaster app.

## How to stop charge

If you are starting your charging session from the app, you should stop charging from the app or stop charging from your vehicle.

If you started your charging session from the physical button, you can stop either by the same physical button, by the app or stop charging from your vehicle.

## Can other people also connect to this charger?

Only one person can connect to the portable charger via Bluetooth at once. The other person must disconnect from the charger before anyone else can connect.

## Setting a repeated charging schedule

Before setting a repeat charge, please make sure you select the preferred current output in the main page. Once this has been set, you can then go into “Custom Charge” at the bottom of your screen, and should be taken to a new page. At the top of the new page, please select repeat charge, and set each option accordingly.

*\*Please note that if you are late to plug in for your repeat charge, you can still plug it in prior to the end time, and the charging session will still start.*

## What happens when I plug in after my scheduled charging time?

As long as you plug in your vehicle prior to the charging session end time, the charging session will start as normal, and will only charge until your selected scheduling finishing time.

## Can I export the charging session data?

Yes, you do this by going to the charging record, then choosing either “My Records” or “All Records” then on the right side of the screen, you should see a share icon. Press on the icon and share accordingly.

## What happens if I have a scheduled charging session and I start it manually?

When you do this, it overrides any scheduled charging sessions set.

## Will my Amp settings be saved if I unplug the charger?

Yes data remains in the APP and on the unit.

## Can I still get charging data if I use the physical button?

Yes, but you will have to look at “All Records” instead of “My Records”. For best results use the APP if you require the date and time of charge recorded.
